

IN THE ABSTRACT

Kindly amend the Abstract as follows, a clean copy of which is included on the following page:

~~The invention relates to an~~An actuating device comprising ~~including~~ a housing that is closed by a cover in such a way that both an electric motor and a gearbox unit are completely enclosed. ~~According to the invention, an~~An internal gear segment, arranged on an output shaft in a rotationally fixed manner, is positioned on a borehole of the cover. An axle on which a double toothed gear is arranged is then mounted on the output side, ~~by means of an~~ a pocket hole in the cover. ~~The inventive embodiment enables~~This reduces the overall length, ~~and as well as~~ the number of components used to be reduced, leading to an optimization of ~~and the cost of the cited actuating device compared to known actuating devices.~~

An actuating device including a housing that is closed by a cover in such a way that both an electric motor and a gearbox unit are completely enclosed. An internal gear segment, arranged on an output shaft in a rotationally fixed manner, is positioned on a borehole of the cover. An axle on which a double toothed gear is arranged is then mounted on the output side, in a pocket hole in the cover. This reduces the overall length, as well as the number of components and the cost.
